Solution Architecture

Gedson Silva

Soluctions Architect
Calafell, Catalonia, Spain

Summary

I’m a Solutions Architect and Software Engineer with nearly 20 years of experience designing, building, modernizing, and scaling software systems.My background combines hands-on software engineering with software architecture, solution architecture, technical leadership, and engineering team leadership. I’ve worked across the complete software development lifecycle, from requirements and architecture through implementation, CI/CD, security, deployment, and production.I have extensive experience with Java, Spring Boot, microservices, distributed systems, REST APIs, integration patterns, event-driven architectures, SQL and NoSQL databases, Elasticsearch, Docker, and cloud platforms including AWS, Azure, and GCP. I’ve designed solutions spanning both cloud and on-premises infrastructure, including modernization and migration of legacy systems.Throughout my career, I’ve worked in finance, Open Banking, insurance, e-commerce, healthcare/ MedTech, government, telecom, and data-intensive systems. This includes highly regulated environments where architecture must account for security, compliance, scalability, reliability, and operational requirements.As an architect and technical leader, I work closely with engineering, product, DevOps, cybersecurity, clients, and business stakeholders to turn business and technical requirements into pragmatic architectures. I’ve led engineering teams of 20+ developers, supported architectural and technical decisions, established engineering practices, and helped teams evolve complex systems safely.I’m particularly interested in software architecture, distributed systems, cloud architecture, system integration, platform modernization, scalability, security, and engineering leadership.My approach to architecture comes from being an engineer first: understand the problem and constraints, make the trade-offs explicit, and design something that teams can actually build, operate, and evolve.

Experience

ERNI

Solutions Architect

October 2023 - Present (3 years 1 month)

Barcelona, Catalonia, Spain

As a Java Solution Architect at ERNI Consulting, I led the architecture, validation, and deployment of a next-generation digital molecular diagnostics platform for a global MedTech leader. The system integrates advanced microfluidic instrumentation, fluorescence imaging, and analytics to deliver fully automated sample-to-result workflows in a regulated environment.

Key achievements & responsibilities:

Designed a microservices-based Java architecture (Spring Boot, DDD) for a validated IVD platform, enabling modularity, scalability, and high availability.

Defined secure API contracts and real-time communication flows between embedded device controllers, imaging modules, and analytical services.

Embedded cybersecurity-by-design and traceability mechanisms into the architecture to comply with FDA, MDR, and ISO 13485 requirements.

Collaborated closely with cross-functional engineering, QA, and regulatory teams to ensure complete software verification, validation, and documentation.

Optimized data processing and system throughput, improving instrument responsiveness and analysis performance while maintaining full regulatory compliance.

Mentored developers and reviewers on architectural best practices, risk management, and documentation for regulated software releases.

The result was a validated, digital diagnostics platform that bridges laboratory instrumentation with secure enterprise systems — advancing the future of precision molecular testing.

Tech Stack:
Java 11/17 | Spring Boot | React | TypeScript | Docker | Microservices | ElasticSearch | MongoDB | PostgreSQL | REST APIs | Agile

Allianz Technology

Technical Lead

July 2022 - October 2023 (1 year 4 months)

Barcelona, Catalonia, Spain

I was responsible to design and delivery of large-scale, customer-facing insurance platforms built on modern Java and cloud-native architectures. Leading two agile teams across the BUX (e-commerce for travel policy purchases) and SSP (policy consultation portal) projects — over 15 developers combined — I oversee the full development lifecycle, ensuring technical excellence, scalability, and alignment with business goals.

I focus on empowering teams, fostering collaboration, and enabling a culture of continuous improvement, code quality, and innovation. My role bridges technical strategy and execution, supporting both architectural design and product delivery while ensuring compliance with corporate and security standards.

Key Achievements & Responsibilities:

Led two cross-functional teams (BUX and SSP) delivering secure, high-performance travel insurance platforms.

Translated complex business requirements into robust, tested, and maintainable software solutions.

Drove cloud migration to AWS (EKS, Lambda, Step Functions, SQS, SNS, S3) and Kubernetes deployments, improving scalability and resilience.

Defined and supervised architectural standards ensuring consistency across microservices and integrations.

Partnered with Product Owners to define priorities, delivery timelines, and project milestones.

Organized and led technical meetings to align development teams, maintain platform stability, and promote shared ownership.

Supported continuous delivery using Jenkins, JIRA, and Agile (Scrum/Kanban) methodologies.

Guided the transition of legacy mainframe applications to cloud-based microservices, leveraging event storming for domain-driven design.

Tech Stack:
Java 8/11 | Spring Boot | Spring Batch | Spring Integration | Angular | TypeScript | GraphQL | AWS | Kubernetes | OpenShift | Microservices | ElasticSearch | MongoDB | PostgreSQL | Apigee | REST APIs | Agile

Serasa Experian

1 year 10 months

Software Architect

October 2020 - July 2022 (1 year 10 months)
São Paulo, Brazil

As a Software Architect at Serasa Experian, I designed and delivered scalable, cloud-native B2B platforms that powered key financial intelligence and credit decision products used by major enterprises across Latin America. My work focused on microservices architecture, cloud transformation, and data-driven innovation to enable new digital credit solutions and real-time analytics.

Key projects & responsibilities:

Self-Service Charging Platform: Architected a multi-tenant platform allowing enterprise clients to orchestrate large-scale debt recovery campaigns through intelligent, data-driven targeting.

Financial Monitoring Platform: Designed event-driven microservices to track portfolio behavior and trigger predictive alerts on financial health and recovery opportunities.

Open Finance Suite: Delivered advanced analytics services — including categorization, income analysis, affordability scoring, and Open Banking score models (V3) — leveraging standardized APIs and secure data integration.

Open Receivables Platform: Architected predictive models and APIs for receivables health and insolvency risk detection, enhancing Experian’s business intelligence offering.

Defined and enforced architecture governance, ensuring compliance with Experian global standards, data protection policies, and best practices in secure development.

Technologies: Java 11 / 17, Spring Boot, AWS (EC2, Lambda, S3), Microservices Architecture, API Gateway, Kafka, Docker, CI/CD (Jenkins / GitLab), PostgreSQL, Redis.

Technical Lead
October 2020 - October 2021 (1 year 1 month)
São Paulo, Brazil

Key technologies: Java 8/11, Spring Boot, Spring Batch, Spring Integration, Apigee, AWS(EKS, Step Functions, Lambda, SQS, SNS, S3, EC2), Elastic Search, MongoDB, Postgres, Openshift, Microservices, Agile(Scrum, Kanban)

Lead a team on a B2C project designed to give a tool for companies, so they can create massive charging campaigns relying on analytical parameters provided by our platform, in order to increase its success. This platform interacts with the largest Brazilian financial institutions using REST API's and Security Transfer for big amount of data.

In a second project, a created an architectural proposal to move Mainframe applications to AWS using event storming to identify domain components, boundaries, and key services needed to the business logic. It was approved and has started.

Avenue Code
Software Engineer
November 2019 - September 2020 (11 months)
Greater São Paulo Area

Key technologies: MAC, Java 8/11, Node, Spring Batch, Hadoop, SCRUM.

I worked mostly for eBay's SEO team, which is responsible to design the architecture and implement solutions to integrate with search engines in order to provide the best data possible, so eBay's products can be shown on the top of the results.

Zup Innovation
Senior Software Engineering
May 2018 - November 2019 (1 year 7 months)
Greater São Paulo Area

Key technologies: MAC, Java 8/11, Node, Spring Batch, Redis, Elasticsearch, Hadoop, Jenkins, Graylog, SCRUM.

I was part of a team responsible for the Loyalty Marketplace of the third-biggest bank in Brazil. In this project, I was responsible for implement backend services to exchanging credit card points. These goals are achieved by integrating the services of many partners via REST APIs or Message Broker (Kafka). In a multifunctional team, I was responsible to help
the backend developers to keep following the previously defined architecture, the development best practices(such as automated tests, design patterns, integration patterns, continuous integration), and the agile manifesto.

Concilia Ltd
Senior Java Developer
October 2017 - May 2018 (8 months)
Greater Belo Horizonte

Key technologies: Java 8, Spring, AWS, Postgres, REST, microservices, Scrum

I worked on a monolithic legacy system to change its architecture, decoupling features in small services given to it the possibility to grow on a large scale. This application deal with a credit card's network and tickets provide for each operation to analyze it and say whether the seller is given the right amount at the right time.

2bw Sistemas
Analista Desenvolvedor Sênior
August 2014 - October 2017 (3 years 3 months)
Greater Belo Horizonte

Key technologies: Linux, Java 8, Spring, AWS, SQL and NoSQL databases, REST, Scrum

On this opportunity, I worked to create a BI tool. Relying on a big variety of integration with different data sources, we build a tool to extract, process, and present data in different structures of customizable dashboards to help with analysis and better business decisions.
I was there on day one and was part of the initial discussions, participating in the whole process until it gets in production being used by big clients such as CBF (Brazilian Football Confederation).

CAST
Desenvolvedor Java Sênior
October 2013 - August 2014 (11 months)
Greater Belo Horizonte

Key technologies: Linux, Maven, Junit, Jenkins, Junit, EJB3, JSF2, Hibernate, Oracle.

In a project of the Ministry of Finance, I worked to build and maintained a portal used to integrate financial institutions and their process of given credit.

Stefanini IT
Desenvolvedor Java Sênior
July 2012 - August 2013 (1 year 2 months)
Greater Belo Horizonte

Key technologies: Maven, PhoneGap, EJB, JSF2, Primefaces Oracle, Websphere.

We build solutions for Usiminas (which is one of the biggest Brazilian mining companies) in terms of communication with their customers. From the intranet portal until the auction platform and ship management, we create a bunch of web and mobile(hybrid) tools to allow customers to get real-time information and interact quickly with Usiminas' staff.

Squadra Tecnologia
Analista Desenvolvedor
December 2010 - April 2012 (1 year 5 months)
Greater Belo Horizonte

Key technologies: Maven, Apache Camel, CXF, EJB3, JAX-RS, JSON, XML, OSGI, Junit, Hudson, Oracle, Hibernate, JDBC, Weblogic, JBoss.

Working on a telecom project I was responsible to build components based on integration patterns in order to communicate with the client's endpoints in many ways like a file system, HTTP, and web services.

Connecta Sistemas
Analista Desenvolvedor
November 2006 - July 2010 (3 years 9 months)
Greater Belo Horizonte

Key technologies: Linux, Java, EJB, Spring, Mysql, Scrum

During my time at Connecta, I've improved my skills to deal with different kinds of teams. Working in a multidisciplinary team, I got involved with all steps in the processes of conception, development, and deployment of products.

Working on projects for the government we build solutions to solve problems in many areas like education, healthcare, security, and financial
